Radar Level Meter **RL100**

Introduction

Radar technology is widely used to measure level in various applications. A radar level meter includes a transmitter with an inbuilt oscillator, a radar antenna, a receiver along with a signal processor and an operator interface. The operation of RL100 involves sending microwave beams emitted by a sensor to the surface of medium in a tank; The electromagnetic waves hitting the fluids surface returns back to the sensor which is mounted at the top of the tank or vessel. The time taken by the signal to return back i.e. time of flight is then determined to measure the level of medium in the tank

Characteristics

Measuring range up to 75m / 246 ft

Reliable performance

Horn or Drip-off antenna

Easy to mount and use

Operating frequency: 80GHz

Applications

Non-contact measurement

Aggressive liquids, solids

Power plant

Chemical processing

Food and beverage

Specifications

Measuring range	75m / 246ft
Operating frequency	80 GHz
Current output	4...20mA
Resolution	1mm
Non-linearity	0.3% of full span
Repeatability	0.3% of full span
Process temperature	-40...85°C / -40...185°F -40...200°C / -40...392°F (Optional)
Process pressure	-0.1...2Mpa / -14.5...290 psi
Protection class	IP67
material	Antenna: stainless steel 316L; PTFE Flange: stainless steel 316L Transmitter housing: aluminum Sealing between housing and cover: silicone rubber Display: PC (Polycarbonate) Wiring terminals: stainless steel
Beam angle	3° / 8°
Process connection	Flange / Thread
Power supply	24VDC
Electrical connection	M20 x 1.5
Operating voltage	20...36 VDC
Over voltage protection	Max. 36VDC
Power consumption	Max. 22.5mA

Dimensions in mm
